## TECHNICAL TRAINING DAY

21 November 2024 | Stafford

# ASSET MANAGEMENT

**FREE** TO ATTEND

Decarbonisation of road surfacing as part of whole carbon lifecycle planning is now the number one priority for local and national roads authorities and the supply chain.

Most if not all local roads authorities have declared a climate emergency and need to act fast to demonstrate they are implementing carbon reduction and sustainability plans for their highway asset management operations.

Join us for this asset management technical training day to see how you can significantly reduce your carbon emissions and improve your financial and practical efficiencies.

The Road Surface Treatments Association is providing this training free of charge to all local and national roads authorities delegates. Refreshments and lunch are also included.

Please note this event is in person attendance only, there is no virtual option and it will not be recorded as the association recognises the importance of good quality face to face training to ensure delegates get the most from the day and can network with other authorities and the supply chain. **BOOK NOW**
